Introduction: The hypermetabolic state after severe burns is a major problem that lead to pathophysiological changes and multiple sequelae. Adrenergic blockade has been used to reverse these changes and improve outcomes, but the efficacy and safety of its use have not been well established. The aim of this systematic review is to investigate the efficacy and safety of use of adrenergic blockade post burn injury.

Methods: A systematic review of articles published was performed using six databases. Search terms included “burns”, “burn”, “burned”, “burn injury” or “thermal injury” for population and “Beta-blockers”, “Adrenergic beta-antagonists” or “propranolol” for intervention. Search process included each database from inception to December 2014 and was restricted by language and study design. After an independent screening and full text review, ten articles were selected and an appraisal of risk of bias was performed.

Results: Pooled analyses were performed to calculate effect sizes and 95% confidence intervals. There was a positive effect favouring propranolol use that significantly decreased resting energy expenditure (g=-0.55; 95%CI -0.8,-0.3; p<0.001) and trunk fat (g=-0.3; 95%CI -0.4,-0.1; p<0.001); and improved muscle protein net balance (g=3.9; 95%CI 3.0,4.8; p<0.001), peripheral lean mass (g=0.45; 95%CI 0.3,0.6; p<0.001) and insulin resistance (g=-1.35; 95%CI -2.0,-0.6; p<0.001). Mortality (RR=0.81, 95%CI=0.48-1.3, p=0.434) and incidence of sepsis (RR=0.80, 95%CI 0.48-1.3, p=0.404) were not significantly different between treated patients and controls.

Conclusions: Evidence suggests beneficial effects of propranolol post burn injury and its use appears safe. However, further trials on adult populations with a broader range of outcome measures are warranted.

Key Words
Burns, adrenergic blockade, beta blockade, propranolol, hypermetabolism

General instructions for preparing your abstract:

- Save this file to your desktop
- Please only capitalise the first word and pronouns in your abstract title
- Make sure you include all the authors and their organisation details in the abstract
- Highlight the presenting author by make his/her name bold
- Your abstract will appear on the web site and in the program book exactly as submitted
